

CAN-AM Access Control with Thermal Detector FAQ Version 1.1

**CAN-AM Wireless LLC
2021**

Content

1. How to upgrade FW?	3
2. What are the requirements for a registered face?	3
3. How to switch on the mask detection (check if the person has a mask)?	4
4. How to modify the logo of ARFaceManager interface	4
5. How to login via web? User and password?	5
6. Sync with device failed	5
7. How to turn off multiple notification for one person/time	5
8. How many different scenarios for opening the door?	6
9. How to control the door?	6
10. WIFI mode (Not recommend)	7
11. Not accurate to detect person who wear a mask	8
12. How to turn on/off attendance record?	9
13. Hoe to change the logo of TFT panel of device?	10
14. How to customize the picture/audio?	10
15. What's the algorithm threshold setting means?	11
16. What are the things that will affect face recognition and or temperature scan accuracy?	12

1. How to upgrade FW?

Answer:

1. Find the device in Device search

2. Click Upgrade

	Name	CHIPID	Ip Address	MAC	SDK	Status	Upgrade	Sel
1	Hero-TD01-G	050014ba	172.16.50.244	00:15:...	0.0.0.33fix4-APP_30-20200505-1005-0-F0001		Upgrade	<input type="checkbox"/>

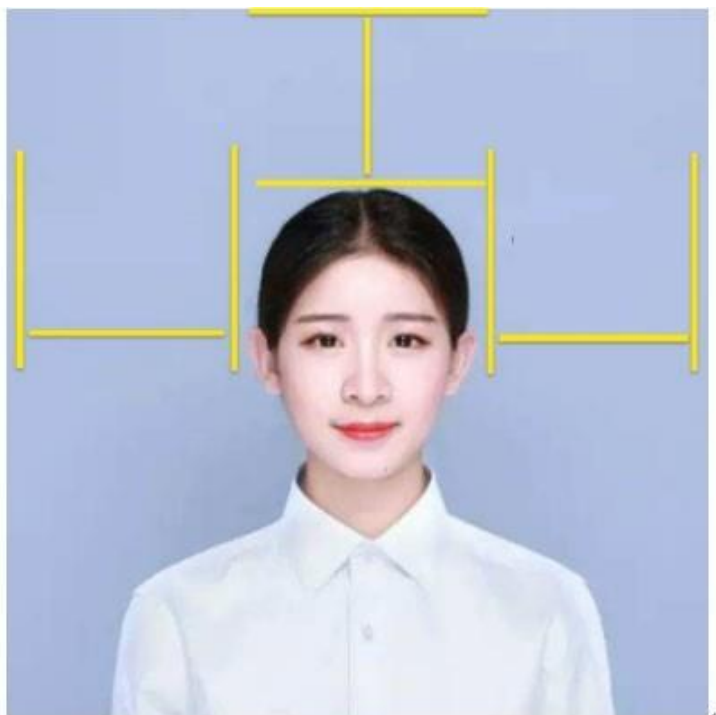

Attention: It takes about 3-5 minutes to upgrade. don't cut power during this period, and don't touch the device /Face manager tool. It will restart automatically after upgraded.

2. What are the requirements for a registered face?

Answer:

1. Turn off camera beauty function of your smart-phone, to ensure that the picture for the real face, no makeup or edited, no wear a mask.
2. The shooting background is solid color and other walls, the light is normal, avoid strong light, reverse light and other abnormal light.
3. There is only one person in the picture, the front (face is not biased, both ears visible, the head is completely visible), shooting distance of about 1 meter, in the picture, the head of the person must have a head distance from the left and right upper three sides.
4. Face pixels more than 260(between the two ears), determine the face size can use the windows drawing software to open the face picture, drag a box on the face, will show the face size. Mobile phone shooting can be satisfied.

Reference Image:

3. How to switch on the mask detection (check if the person has a mask)?

Answer: You can configure it through the ARFaceManager tool.

ARFaceManager-V1.6.27(May 20 2020-14:49:25)

Added Devices

	Ip Address	Position
1	192.168.1.100	12
2	172.16.40.123	thermo

Default Value

Max Width: 0 1280 (400) Min Width: 0 1280 (40) Max Yaw Angle: 0 30 Min Yaw Angle: -1 (-30)

Max Height: 0 720 (400) Min Height: 0 720 (40) Max Pitch Angle: 30 Min Pitch Angle: (-30)

Max Roll Angle: 0 30 Min Roll Angle: (-30) Quality Score Th: 30 Straight Face Th: 30

Blur Threshold: 0 30 Recognize Thresh: 60

4. How to modify the logo of ARFaceManager interface

Answer:

Go to ARFace Manager directory: Res

Put in logo png format picture ,120*40 resolution

192.168.1.100	2020/5/22 19:11
res	2020/5/8 17:53
staff	2020/5/14 11:16
ARFaceManager_V1.6.23.exe	2020/4/22 10:23

5. How to login via web? User and password?

Answer: IP:8080, such as 192.168.1.100:8080.

User: admin, **Password:** admin123456

You can change the password as following

The screenshot shows the CAN-AM web interface. The top navigation bar has 'Preview' and 'Configuration' tabs. The left sidebar contains 'System', 'System Settings', 'System Maintenance', and 'User Management'. The main content area is titled 'User Management' and contains a 'User List' table. The table has columns for 'No.', 'Username', and 'User Type'. There is one entry with 'No.' 1, 'Username' 'admin', and 'User Type' 'Administrator'. To the right of the table are buttons for 'Security Questions' and 'Modify'. A red arrow points to the 'Modify' button.

6. Sync with device failed

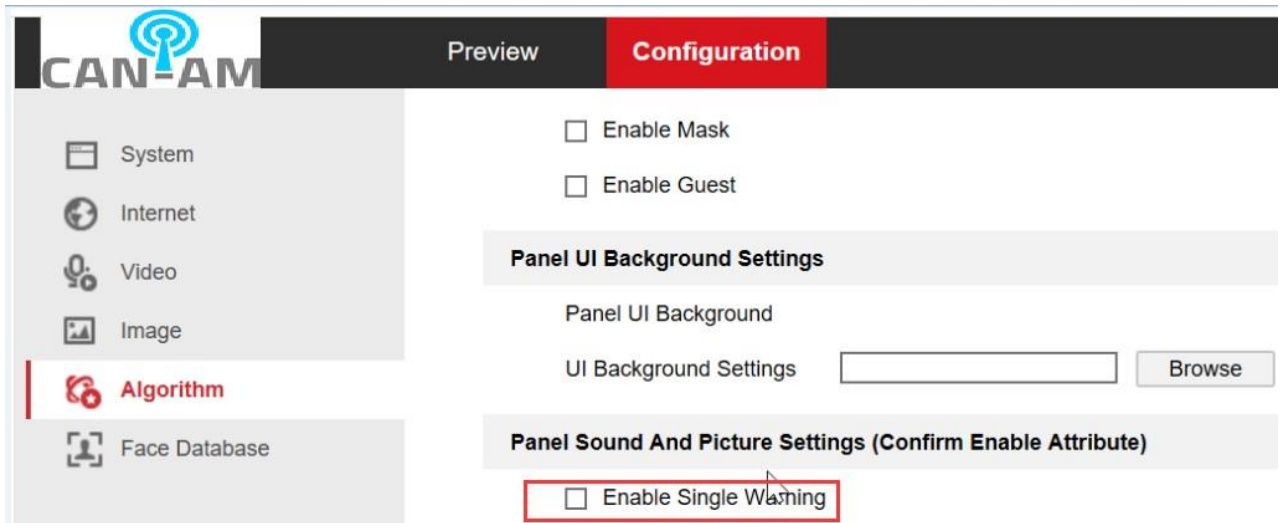

Answer: Check the picture and WorkID /ID, name info, there is a **Remarks** about it.

The screenshot shows a sync error dialog box with the text '[8.116]: [1] records, [1] failed' and an 'OK' button. Below the dialog box is a user record form. The form has fields for Name, WorkId, ID, Age, Gender, Group, Phone, Mail, and Addr. The Remarks field contains the text 'No face detect'. Red arrows point to the Name, WorkId, and ID fields. A red box highlights the Remarks field.

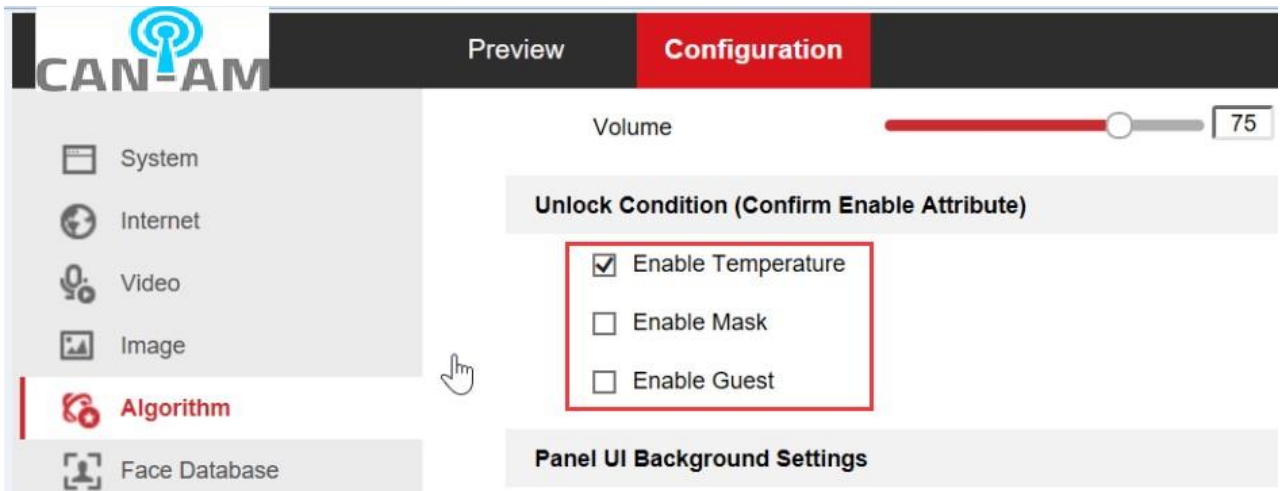

Normally, it's your face picture is not clear or standard. The software didn't detect it.

7. How to turn off multiple notification for one person/time

8. How many different scenarios for opening the door?

Answer:

There are 8 kinds of conditions

1. Temperature: The registered staff who temperature is normal could open the door
2. Mask: The registered staff who wear the mask could open the door
3. Guest: Anyone could open the door, no matter the temperature/mask is normal or abnormal
4. Temperature+Guest: Anyone who temperature is normal could open the door.
5. Mask+Guest: Anyone who wear the mask could open the door.
6. Temperature+mask: The registered staff who temperature & wear mask could open the door.
7. Temperature+mask+Guest: Anyone who temperature is normal&wear mask could open the door.
8. Nothing selected:The registered staff in white-list or authority group, who temperature is normal & wear a mask could open the door.

9. How to control the door?

Answer:

1. Set the access control, refer to our manual for details --3.2.8

2. Connect the Out

D OUT-4pin	lock control signal	1	PUSH_OUT	Switching Level Output
		2	LOCK_NONC_12V	12V switching drive output
		3	GND	Ground
		4	12V out	12V power output

For different lock, the connection is different.

Normal open mode:

If you connect pin1&pin3, it generate about 2-3V , it drops to 0V for a while(Door lock time) when get control signal.

If you connect pin2&pin3, it's 0V normally, it generate 12V for a while(Door lock time) when get control signal.

Normal close mode:

If you connect pin1&pin3, it generate about 0V normally , it generated 2-3V for a while(Door lock time) when get control signal.

If you connect pin2&pin3, it's 12V normally, it generate 0V for a while(Door lock time) when get control signal.

10. WIFI mode (Not recommend)

Answer:

1. Login the device via LAN IP address on web-end
2. Use DHCP mode for LAN, don't set static LAN IP address, or else WIFI mode will not work.

The screenshot shows the CAN-AM Configuration page with the 'Configuration' tab selected. The left sidebar contains 'System' and 'Internet' under 'basic configuration', and 'Video' and 'Image' under other categories. The main content area is titled 'TCP/IP' and shows the following settings:

- NIC type: Wired (dropdown menu)
- Automatic Acquisition: (checkbox, highlighted with a red box)
- IPv4 Address: 192.168.1.100 (text input)
- IPv4 Subnet Mask: 255.255.255.0 (text input)
- test: (button)

3. Switch to Wireless, input the WIFI info ,and save it.

The screenshot shows the CAN-AM Configuration page with the 'Configuration' tab selected. The left sidebar contains 'System' and 'Internet' under 'basic configuration', and 'Video', 'Image', 'Algorithm', and 'Face Database' under other categories. The main content area is titled 'TCP/IP' and shows the following settings:

- NIC type: Wireless (dropdown menu, highlighted with a red box)
- Wifi Network Mode: STA Mode (dropdown menu, highlighted with a red box)
- SSID: Howen4 (text input)
- password: howen123 (text input)
- IPv4 Address: 172.16.50.222 (text input)
- IPv4 Subnet Mask: 255.255.255.0 (text input)
- IPv4 Default Gateway: 172.16.50.254 (text input)
- MAC Address: AC:64:CF:7E:2E:C3 (text input)
- Save: (red button)

4. After you **save**, you can get the assigned WLAN IP address. mark it down, coz WLAN IP address will not display on TFT screen.

5. Go to FaceManger, add the device via manually(input the WLAN IP address), must add it via manually(Can not search it)

11. Not accurate to detect person who wear a mask

Answer:

When less than 100 registered staff, change the value to 60 or 70.

13. How to change the logo of TFT panel of device?

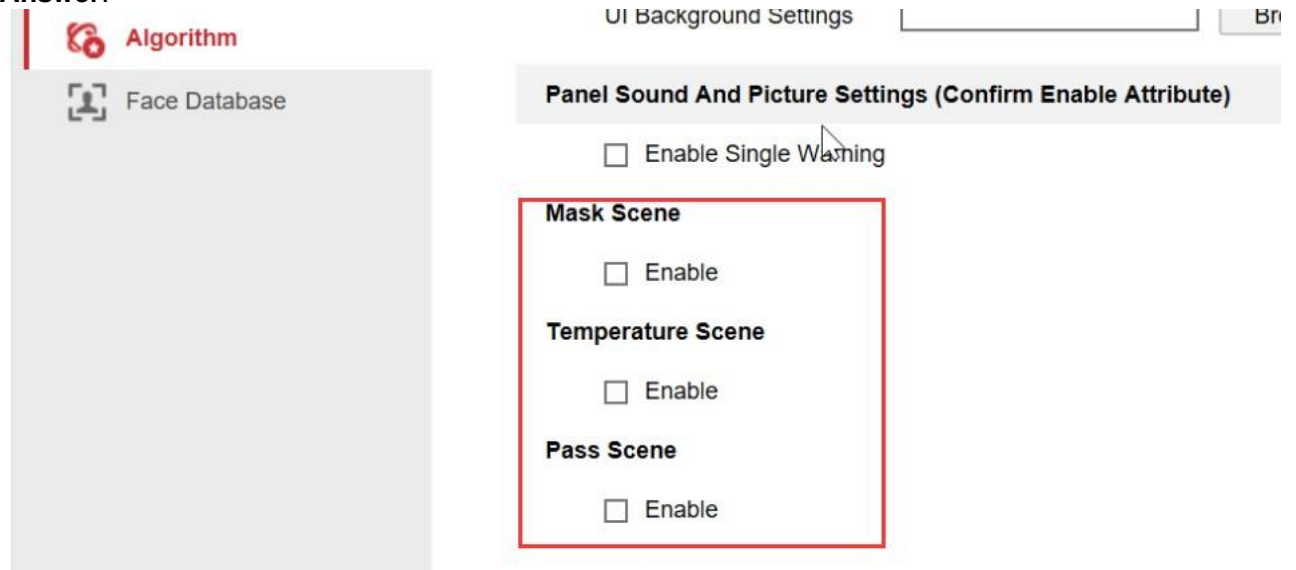

Answer:

600*1024 PNG picture.

14. How to customize the picture/audio?

Answer:

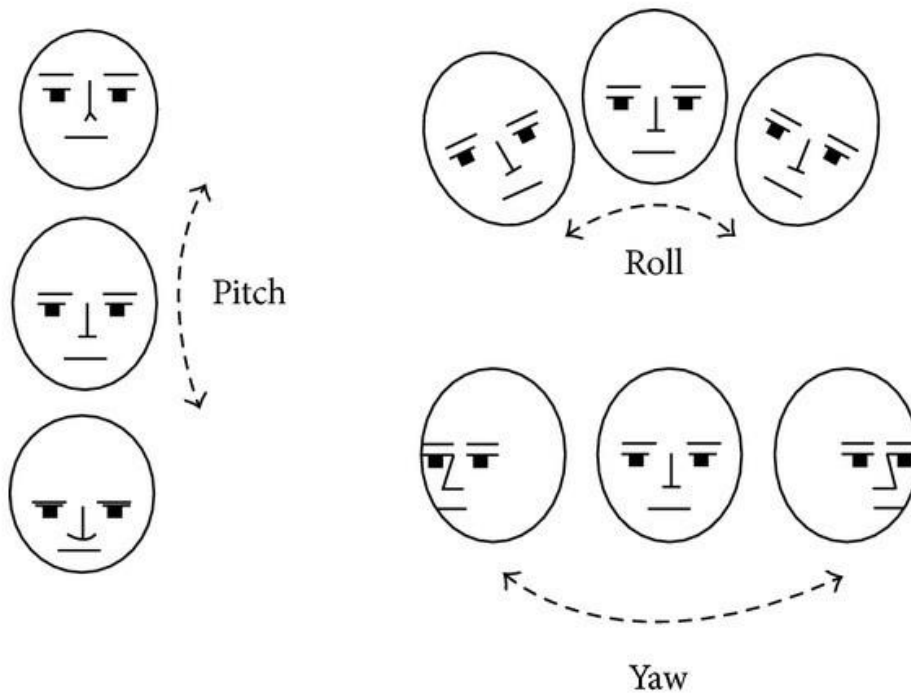

Mask scenario: Enable it, and customize the picture or audio when someone is not wearing the mask;

Temperature scenario: Enable it, and customize the picture or audio when temperature is abnormal;

Pass Scenario: Normal(temperature is normal and wear mask) status's picture and audio.

15. What's the algorithm threshold setting means?

Default Value							
Max Width (0~1280)	400	Min Width (0~1280)	40	Max Yaw Angle (0~180)	30	Min Yaw Angle (-180~0)	-30
Max Height (0~720)	400	Min Height (0~720)	40	Max Pitch Angle (0~180)	30	Min Pitch Angle (-180~0)	-30
Max Roll Angle (0~180)	30	Min Roll Angle (-180~0)	-30	Quality Score Threshold (0~100)	30	Straight Face Threshold (0~100)	50
Blur Threshold (0~100)	30	Recognize Threshold (0~100)	90				

- 1. Max width(0-1280):**The maximum width of the effective pixels of the face. If the width of the face in the camera is bigger than this value, and it will not be detected.
- 2. Min. Width(0-1280):**The minimum width of the effective pixels of the face. If the width of the face in the camera is lower than this value, and it will not be detected.
- 3. Max Height(0-720):** The maximum height of the effective pixels of the face. The height of the face in the camera is bigger than this value, and it will not be detected.
- 4. Min Height(0-720):** The minimum height of the effective pixels of the face. The height of the face in the camera is lower than this value, and it will not be detected.
- 5. Max yaw Angle(-180 ~0):**In the camera view, if the face Yaw is bigger than this maximum value ,and it will not be detected.
- 6. Min Yaw Angle(-180~0):**In the camera view, if the face Yaw is lower than this minimum value ,and it will not be detected.
- 7. Max Pitch Angle(0-180):**In the camera view, if the face Pitch is bigger than this maximum value ,and it will not be detected.
- 8. Min Pitch Angle(0-180):**In the camera view, if the face Pitch is lower than this minimum value ,and it will not be detected.

9.**Max Roll Angle**(0-180): In the camera view, if the face Roll is bigger than this maximum value ,and it will not be detected.

10.**Min Roll Angle**(0-180):In the camera view, if the face Roll is lower than this minimum value ,and it will not be detected.

11.**Quality Score Threshold**(0-100):The value of the face quality, In scenes when the quality of the face image is lower, lowering this value will help improve the face recognition rate and speed up the recognition speed.

12.**Straight Face Threshold**(0-100): Front face threshold. Not available.

13.**Blur Threshold**(0-100):When face is unclear or blur, increasing this value will help improve the face recognition rate and speed up the recognition speed.

14.**Recognize threshold**(0-100):Used for face recognition. When the similarity between the passer and a registered person is higher than this value, the recognition is considered successful.

16. What are the things that will affect face recognition and or temperature scan accuracy?

Temperature scan accuracy will be affected in the following conditions:

- If the device is not powered on for 20 minutes initially to warm up. This is especially true in cold ambient temperature.
The ideal ambient temperature will be around 77 Fahrenheit.
- Temperature scan is being done by taking temperature points on the person's forehead therefore a bandana or any type of head covering must be removed.

Face recognition accuracy will be affected in the following conditions:

- If a person is wearing some type of gaiters.
- Bright light in the background may affect the camera system.
